Subject Index

Adsorption
Reduction in the cholesterol content of butter oil using supercritical ethane extraction and adsorption on alumina 225
Alumina
Reduction in the cholesterol content of butter oil using supercritical ethane extraction and adsorption on alumina 225
Analyte/matrix interaction
Investigation of modifier effects in supercritical CO extraction from various solid matrices 33
Analyte/modifier/matrix complex
Investigation of modifier effects in supercritical CO extraction from various solid matrices 33
Application
An equation of state describing the critical region: extension to high pressure 1

$BaCl_2$
Crystal formation of $BaCl_2$ and NH_4Cl using a supercritical fluid antisolvent 235
β-carotene
Solubility of β-carotene in supercritical carbon dioxide and ethane 99

Carbon dioxide
Solubility of β-carotene in supercritical carbon dioxide and ethane 99
Casein
Measurement of the solubility of carbon dioxide in milk at high pressures 21
Chemistry
Reactions of diphenylether in supercritical water — mechanism and kinetics 119
Cholesterol removal
Reduction in the cholesterol content of butter oil using supercritical ethane extraction and adsorption on alumina 225
CO
Phase equilibria of the CO–Jiangsu crude oil system and precipitation of heavy components induced by supercritical CO 27
CO2
Measurement of the solubility of carbon dioxide in milk at high pressures 21
CO_2-limonene-linalool
Modeling high-pressure vapor–liquid equilibrium of limonene, linalool and carbon dioxide systems 107
Continuous extraction
Reduction in the cholesterol content of butter oil using supercritical ethane extraction and adsorption on alumina 225
Counterdiffusion model
Numerical modeling of mass transfer in the supercritical antisolvent process 167
Critical region
An equation of state describing the critical region: extension to high pressure 1
Crude oil
Phase equilibria of the CO–Jiangsu crude oil system and precipitation of heavy components induced by supercritical CO 27
Crystal formation
Crystal formation of $BaCl_2$ and NH_4Cl using a supercritical fluid antisolvent 235

DAC
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670°C 207
Dairy products
Reduction in the cholesterol content of butter oil using supercritical ethane extraction and adsorption on alumina 225
Degreasing
Supercritical CO_2 extraction as a clean degreasing process in the leather industry 217
Diffusion of CO in PET
Mass transfer in polymers in a supercritical CO - atmosphere 81
Diffusion of disperse dyes in PET
Mass transfer in polymers in a supercritical CO - atmosphere 81
Diphenylether
Reactions of diphenylether in supercritical water — mechanism and kinetics 119
Droplet swelling
Numerical modeling of mass transfer in the supercritical antisolvent process 167
Dyestuffs (disperse)
Sample purification for spectroscopic high-pressure investigations by dynamic supercritical fluid extraction 157

Equation of state
An equation of state describing the critical region: extension to high pressure 1
Esters
Hydrolysis of esters in subcritical and supercritical water 189
Ethane
Solubility of β-carotene in supercritical carbon dioxide and ethane 99
Ethylene glycol
On the effect of polymer fractionation on phase equilibrium in CO_2 + poly(ethylene glycol)s systems 261

Fat
Supercritical CO_2 extraction as a clean degreasing process in the leather industry 217
Fatty acid esters
High-pressure apparatus for phase equilibria studies: solubility of fatty acid esters in supercritical CO 11
Fermentation
Effect of pressurized solvents on ethanol production by the thermophilic bacterium *Clostridium thermocellum* 149

High pressure
An equation of state describing the critical region: extension to high pressure 1
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Modeling high-pressure vapor–liquid equilibrium of limonene, linalool and carbon dioxide systems 107
Hydrolysis
Hydrolysis of esters in subcritical and supercritical water 189

In-situ extraction
Effect of pressurized solvents on ethanol production by the thermophilic bacterium *Clostridium thermocellum* 149

Kinetics
Reactions of diphenylether in supercritical water — mechanism and kinetics 119
Hydrolysis of esters in subcritical and supercritical water 189
Kinetics of phase separation
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59

Light scattering
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Liquid vapor equilibria
An equation of state describing the critical region: extension to high pressure 1

Mass transfer coefficient
Mathematical models for supercritical extraction of olive husk oil 43
Mathematical models
Mathematical models for supercritical extraction of olive husk oil 43
Mechanism
Reactions of diphenylether in supercritical water — mechanism and kinetics 119
Hydrolysis of esters in subcritical and supercritical water 189

NH_4Cl
Crystal formation of $BaCl_2$ and NH_4Cl using a supercritical fluid antisolvent 235
Nucleation and growth
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59

Olive husk oil
Mathematical models for supercritical extraction of olive husk oil 43
Orange peel oil
Modeling high-pressure vapor–liquid equilibrium of limonene, linalool and carbon dioxide systems 107

Particle formation
Numerical modeling of mass transfer in the supercritical antisolvent process 167
Phase behavior
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670C 207
Phase equilibria
High-pressure apparatus for phase equilibria studies: solubility of fatty acid esters in supercritical CO 11
Phase equilibrium
Phase equilibria of the CO–Jiangsu crude oil system and precipitation of heavy components induced by supercritical CO 27
On the effect of polymer fractionation on phase equilibrium in CO_2 + poly(ethylene glycol)s systems 261
Poly-(ethylene-terephthalate)
Mass transfer in polymers in a supercritical CO - atmosphere 81
Polydimethylsiloxane
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Polyethylene
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670C 207
Poly(ethylene glycol)
On the effect of polymer fractionation on phase equilibrium in CO_2 + poly(ethylene glycol)s systems 261

Polymer fractionation
On the effect of polymer fractionation on phase equilibrium in CO_2 + poly(ethylene glycol)s systems 261
Polymer solutions
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Precipitation
Phase equilibria of the CO–Jiangsu crude oil system and precipitation of heavy components induced by supercritical CO 27
Pressure quench
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Proteins
Measurement of the solubility of carbon dioxide in milk at high pressures 21
Purification
Sample purification for spectroscopic high-pressure investigations by dynamic supercritical fluid extraction 157

Raman
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670C 207
Reaction
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670C 207
Recovery
Supercritical CO_2 extraction as a clean degreasing process in the leather industry 217

SFC
Sample purification for spectroscopic high-pressure investigations by dynamic supercritical fluid extraction 157
Sheepskins
Supercritical CO_2 extraction as a clean degreasing process in the leather industry 217
Silica suspensions
Steric stabilization of inorganic suspensions in carbon dioxide 247
Solubility
High-pressure apparatus for phase equilibria studies: solubility of fatty acid esters in supercritical CO 11
Solubility of β-carotene in supercritical carbon dioxide and ethane 99
Solubility data
Measurement of the solubility of carbon dioxide in milk at high pressures 21
Solubility measurements
Measurement of the solubility of carbon dioxide in milk at high pressures 21
Solvatochromic parameters
Investigation of modifier effects in supercritical CO extraction from various solid matrices 33
Solvent effects
Sample purification for spectroscopic high-pressure investigations by dynamic supercritical fluid extraction 157
Solvent modification
Investigation of modifier effects in supercritical CO extraction from various solid matrices 33
Spinodal decomposition
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Stabilizer chains
Steric stabilization of inorganic suspensions in carbon dioxide 247
Steric stabilisation
Steric stabilization of inorganic suspensions in carbon dioxide 247
Subcritical water
Thiodiglycol hydrolysis and oxidation in sub- and supercritical water 133
Supercritical
Hydrolysis of esters in subcritical and supercritical water 189
Supercritical CO_2 extraction
Supercritical CO_2 extraction as a clean degreasing process in the leather industry 217
Supercritical antisolvent
Numerical modeling of mass transfer in the supercritical antisolvent process 167
Supercritical carbon dioxide
Mass transfer in polymers in a supercritical CO - atmosphere 81
Effect of pressurized solvents on ethanol production by the thermophilic bacterium *Clostridium thermocellum* 149
On the effect of polymer fractionation on phase equilibrium in CO_2 + poly(ethylene glycol)s systems 261
Supercritical CO
High-pressure apparatus for phase equilibria studies: solubility of fatty acid esters in supercritical CO 11
Supercritical CO extraction
Investigation of modifier effects in supercritical CO extraction from various solid matrices 33
Supercritical deterpenation
Modeling high-pressure vapor–liquid equilibrium of limonene, linalool and carbon dioxide systems 107
Supercritical ethane
Effect of pressurized solvents on ethanol production by the thermophilic bacterium *Clostridium thermocellum* 149
Supercritical extraction
Mathematical models for supercritical extraction of olive husk oil 43
Supercritical fluid
Phase equilibria of the CO–Jiangsu crude oil system and precipitation of heavy components induced by supercritical CO 27
Supercritical fluid antisolvent
Crystal formation of $BaCl_2$ and NH_4Cl using a supercritical fluid antisolvent 235

Supercritical fluids
Kinetics of pressure-induced phase separation (PIPS) in solutions of polydimethylsiloxane in supercritical carbon dioxide: crossover from nucleation and growth to spinodal decomposition mechanism 59
Solubility of β-carotene in supercritical carbon dioxide and ethane 99
Supercritical water
Reactions of diphenylether in supercritical water — mechanism and kinetics 119
Thiodiglycol hydrolysis and oxidation in sub- and supercritical water 133
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670°C 207
Superficial velocity
Mathematical models for supercritical extraction of olive husk oil 43
Swelling of polymers in CO
Mass transfer in polymers in a supercritical CO - atmosphere 81

Thermophilic bacteria
Effect of pressurized solvents on ethanol production by the thermophilic bacterium *Clostridium thermocellum* 149
Thiodiglycol hydrolysis
Thiodiglycol hydrolysis and oxidation in sub- and supercritical water 133
Thiodiglycol oxidation
Thiodiglycol hydrolysis and oxidation in sub- and supercritical water 133
Two-way mass transfer
Numerical modeling of mass transfer in the supercritical antisolvent process 167

Vapor–liquid equilibrium
Modeling high-pressure vapor–liquid equilibrium of limonene, linalool and carbon dioxide systems 107
Variable-volume view cell
High-pressure apparatus for phase equilibria studies: solubility of fatty acid esters in supercritical CO 11
VIS spectroscopy
Sample purification for spectroscopic high-pressure investigations by dynamic supercritical fluid extraction 157
Visual microscopy
Phase behavior and reaction of polyethylene in supercritical water at pressures up to 2.6 GPa and temperatures up to 670C 207

Water
Hydrolysis of esters in subcritical and supercritical water 189
